

FLEE®

Environmental Spray

Bimeda®
百美达

A UNIQUE, SAFE AND POWERFUL TOOL TO CONTROL FLEAS

HIGHLY EFFICIENT TO CONTROL FLEAS

FLEE® is the only product on the market which is active against all stages of flea's life cycle, including pupae protected by its cocoon. It also demonstrated to be as efficient as chemical treatments to neutralise adult fleas within 3 minutes, as well as eggs and larvae.

TOTALLY SAFE FOR ALL FAMILY MEMBERS AND PETS

FLEE® is not a chemical pesticide and the mode of action of its active ingredient, dimeticone, is purely mechanical. As a result, FLEE® is 100% non-toxic and other dimeticone based products have been widely used to control head lice infestations in children and colic in babies.

HELP IN FIGHTING ALLERGIC DERMATITIS

FLEE® works as a sticky trap, creating a thin but permanent layer neutralising fleas, dust mites, but also all their integumentary material (debris and faeces) which are proven allergens. Moreover, dimeticone itself is neither irritating nor allergenic to the skin.

BENEFITS

- Neutralizes all stage of flea's life cycle
- Pesticide free, totally safe
- Non-toxic and non-irritating
- Odorless and colorless
- Not sticky on fingers, doesn't leave stains
- Eliminates triggers of atopic dermatitis and asthma

See reverse for Administration & Dosage

FLEE®

PESTICIDE FREE

Environmental Spray

PACKAGING

400ml pressurized aerosol container.

COMPOSITION

FLEE® contains a patented combination of silicones. The active ingredient is dimeticone at a concentration of 0.4%. Also contains cyclomethicone and propellant gases (propane and butane).

TARGET SPECIES

All stages of dog and cat flea's life cycle.
Dust mites.

MODE OF ACTION

The mode of action is mechanical and as a result there cannot be any chemical resistance issue.

FLEE® forms a thin but permanent film of dimeticone all over the body of fleas and dust mites, as well as on the surface of cocoons and eggs. It works as a glue-like trap which immobilizes adult and larval stages, who later die of starvation. Pupae protected by its cocoon keeps developing but fail to emerge, ending up starving as adult and larvae do. Eggs fail to hatch.

DIRECTIONS FOR USE

Shake well the can before use.

Direct nozzle approximately 40 cm from the surface you want to treat and away from your body. Using a sweeping motion to ensure uniform delivery, apply a 14 seconds spray per square meter.

It is not necessary to treat the whole surface of your house, just treat carpets, upholstered furniture and pet bedding where the dog or cat lives, along with intersections of hard non-porous floor surfaces, if any, and walls in the immediate surroundings. Eggs, larvae and cocoons usually hide in corners and crevices, and fleas usually do not live on non-porous plain surfaces like tiles. As a result, you do not need to treat such areas (if spray FLEE® on tiles, tiles will appear wet for approximately 30 minutes and may present a slip hazard until dry). You may notice slightly darker shading on sprayed surfaces, this is normal and will disappear as the product dries off completely. If spraying large areas, occasionally shake can to maintain an even distribution of product. Wash hands after use.

YOU DO NOT need to ventilate the room after application. A 400ml can of FLEE® will treat an 80 square meter area, which is enough to treat an average 3 bedroom house.

PRECAUTIONS

Keep away from food and drinks.

Avoid eye contact. If your eyes are accidentally affected, flush with plenty of clean water and seek medical advice if irritation persists.

Due to the oily nature of the ingredients, some surfaces could be slightly slippery before they dry. Take necessary precautions if this is the case.

FLEE® can be used on most surfaces. However, before use on large surfaces or potentially delicate fabrics such as leather, we recommend that you test a small, out-of-sight area to check the suitability of the product with the material.

WARNINGS

Pressurized container: protect from sunlight and do not expose to temperatures exceeding 50°C.

Do not pierce or burn even after use.

Do not spray on or near a naked flame, electrical equipment or any incandescent material.

Keep away from sources of ignition – No smoking.

Keep can out of the reach and sight of children.

Use only as directed.

Please recycle when empty.
